

GRPO: modest training changes, no sustained functional gain

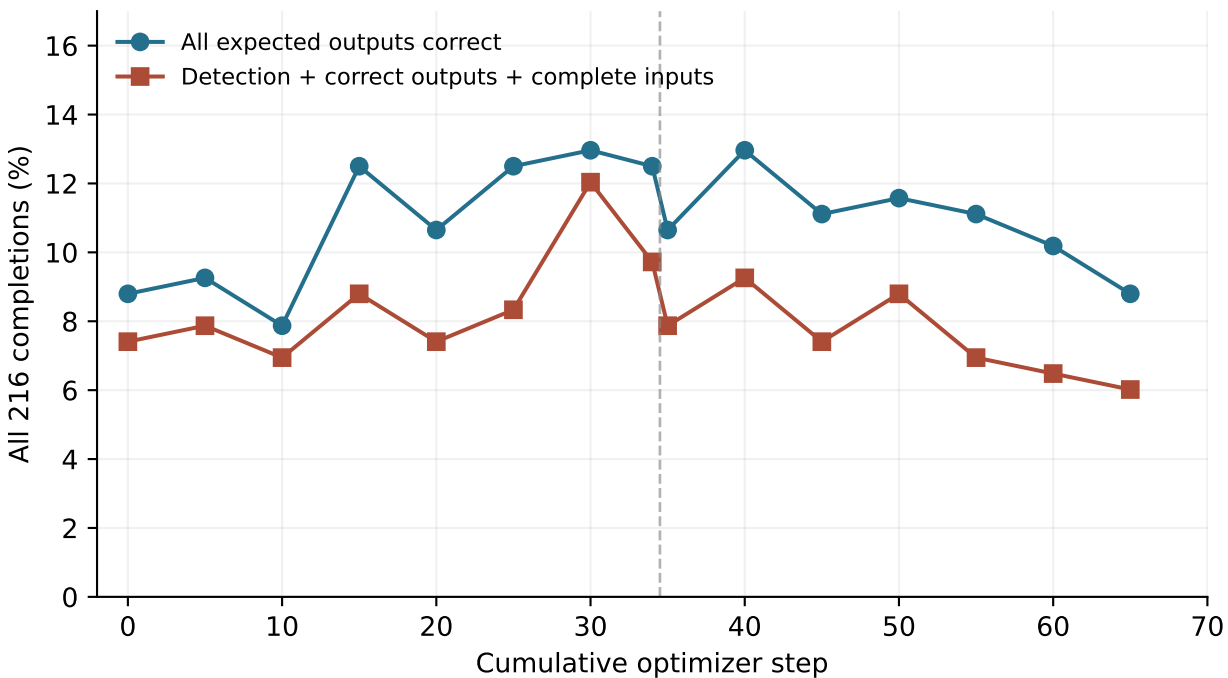

Training detection varies with the prompt batch

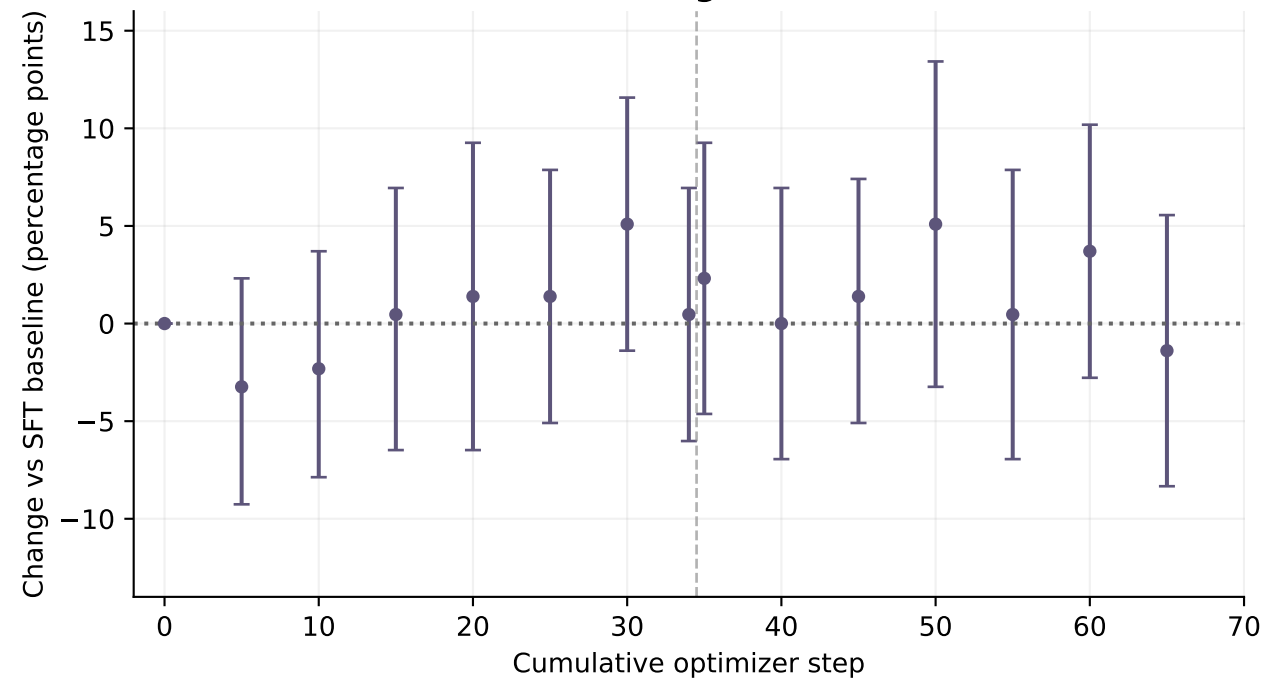

Fixed detection: 64.81% → 63.43%

Usable answers remain rare: 7.41% → 6.02%

Paired detection change remains uncertain

Dashed line: session boundary. Fixed set: 72 circuits × 3 samples; latest evaluation is step 65, latest checkpoint is 67.
Intervals: paired circuit bootstrap (20,000 draws), one seed; historical set overlaps SFT training.
